

# SMOG CHECK ADVISORY

OFFICIAL PUBLICATION OF THE CALIFORNIA DEPARTMENT OF CONSUMER AFFAIRS' BUREAU OF AUTOMOTIVE REPAIR

## “CLEAN CAR” REPAIR EFFECTIVENESS PROGRAM GOES STATEWIDE

The Department of Consumer Affairs' Bureau of Automotive Repair's (DCA/ BAR) "Clean Car" Repair Effectiveness program was recently expanded statewide to include on-site reviews of diagnoses and repairs made to vehicles that failed Smog Check inspections.

Due to the expanded mission, BAR representatives are now visiting licensed Test and Repair stations to look at how vehicles are being diagnosed and repaired—the more effective the repairs are, the lower the emissions will be on a biennial Smog Check certification test.

"The trend of 'fix to pass' has contributed to California not meeting its clean air goals and we're proactively taking steps to address this problem through the Clean Car program," said Richard (Dick) Sullivan, BAR Smog Check Field Operations and Enforcement Program Manager. "We want to help technicians identify those repairs that are most effective in reducing emissions."

The Repair Effectiveness Program is an integral part of BAR's existing Quality Assurance Program. The visits are designed to educate and motivate station

owners and technicians about how to properly perform complete diagnoses and repairs on vehicles that fail their Smog Check inspections.

"Since the expanded program began on September 1, we've visited about 240 stations, and approximately 65 percent of those stations have improved their repair effectiveness performance," Sullivan said.

When a BAR representative visits a station to discuss diagnostic and repair issues, technicians are asked specific

*(continued on page 3)*

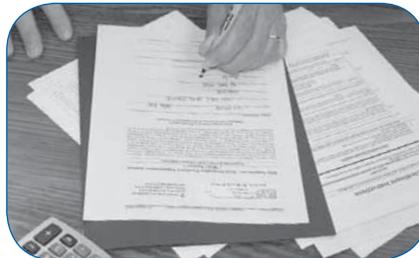

## ROLL OUT OF NEXT GENERATION ET SYSTEM UNDERWAY

The California Department of Consumer Affairs' Bureau of Automotive Repair (DCA/BAR) recently began the roll out of the new Next Generation Electronic Transmission (NGET) system at California Smog Check stations. The transition is expected to be complete by the end of 2006.

BAR awarded the contract to SGS Testcom, Inc., as part of a competitive bid process. SGS Testcom replaces MCI as BAR's ET contractor and is expected to provide services to licensed California Smog Check stations for the next several years.

According to information posted on its Web site ([www.sgstestcom.com](http://www.sgstestcom.com)), SGS is the world leader in smog inspection, verification, testing, and certification. SGS' work has been recognized as the global benchmark for quality and integrity. With a workforce of 42,000, SGS operates a network of approximately 1,000 offices and laboratories worldwide.

"Once SGS processes the enrollment forms, stations are receiving confirmation letters approximately two weeks before

A Smog Check station owner fills out SGS Testcom's Inspection Station Enrollment Form.

their station is scheduled to be transitioned from MCI to SGS Testcom. [SGS] also includes instructions on how to change access numbers in the Emissions Inspection Systems (EIS)," said BAR Chief Richard (Dick) Ross.

Smog Check stations were required to enroll in the new ET system no later than December 28, 2005. Stations that fail to enroll in the new system or provide necessary banking information to SGS will be unable to purchase Smog Check certificates through the BAR-97 EIS. SGS Testcom will, however, accept certificates purchased from MCI that are still in BAR-97 at the time of the transition. This action

will allow stations to continue to perform Smog Check inspections until the changeover is completed.

"The SGS Testcom Help Desk at (866) 9NO-SMOG and the local BAR field offices are available to help any station having difficulty during this transition," said Ross. "If there are any stations that have not received their informational packets, they are urged to contact either the BAR field office or the help desk immediately."

EA	225	99	44%
EB	4	1	25%

## CYTD TOTALS 2005

LICENSE CLASS	# TESTED	# PASS	%PASS
EA	2,925	1,508	52%
EB	51	26	51%

## SMOG CHECK ADVISORY

### CLEAN CAR *(continued from page 1)*

questions about specific cars recently repaired at the station. They should be ready to explain how they arrived at a diagnosis and why certain repairs were performed. Proper diagnosis and appropriate repairs not only make sense, it's the law.

Here are some tips to help you perform more effective repairs:

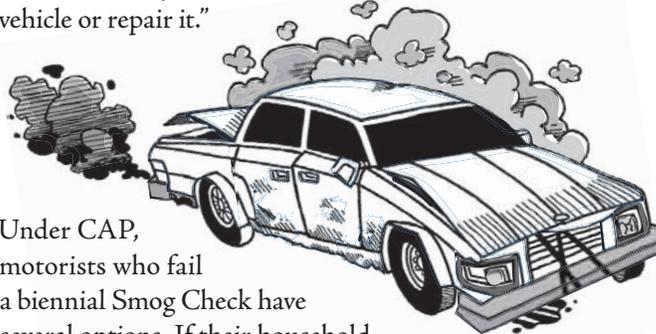

1. Perform a baseline test to show the current tailpipe emissions and overall condition of the emission control components. (Don't base your diagnosis on someone else's inspection results—they may not be a current reflection of the vehicle's condition).
2. Perform a complete diagnosis on each vehicle using up-to-date diagnostic reference materials. Many companies offer both printed and electronic diagnostic and repair information.
3. Communicate to your customers the whole story of what is wrong with their vehicle. Take the time to educate them about the benefits of a properly running vehicle—increased performance, better fuel economy, a dependable car and, of course, the environmental benefits. Be sure to get your customer's authorization for the repairs, and completely fill out estimates and invoices with all required information.
4. After you are finished with the repairs, verify that the problem is fixed by performing a Smog Check pre-inspection. Remember that many computer-controlled vehicles take a little time to return to normal operation after a defect has been repaired.
5. Evaluate the after repairs pre-test emissions data to confirm that the problem is repaired. (Use the emission cut points and average passing emissions printed on each Vehicle Inspection Report as a guide to tell you if the vehicle is going to just squeak under the cut-points or is nearer the average passing emissions for like make and model vehicles.)
6. Finally, certify the vehicle or, when appropriate, refer it back to a Test-Only Smog Check station.
7. Enter repair data when prompted by the EIS unit. Don't forget to enter any repairs that were recommended but not performed using the E option in the repair data entry section of the EIS.

"Following these tips and instructions will not only keep shops and technicians in compliance with the law, but it will help clean the air, which is the goal of the Smog Check Program," Sullivan said.

### CAP PROGRAM EXCELLENT BUSINESS TOOL FOR GOLD SHIELD AND TEST-ONLY STATIONS

Not only is the Department of Consumer Affairs' Bureau of Automotive (DCA/BAR) Consumer Assistance Program (CAP) designed to help California motorists repair their vehicles when they fail a biennial Smog Check, it's also a great marketing and business tool.

"This program is a very smart way to provide exceptional customer service," said Michael Lafferty, BAR's CAP Program Manager. "It's also an opportunity to be a hero to your customers and help people when they really need it, whether they want to retire their vehicle or repair it."

Under CAP, motorists who fail a biennial Smog Check have several options. If their household income is at or below 185 percent of the federal poverty guideline (\$35,798 annually for a family of four), they are eligible for financial assistance up to \$500 to repair their vehicle. Qualified vehicle owners must pay the first \$20 toward diagnosis and/or emissions-related repairs.

Motorists who are required to have their vehicles tested at a Test-Only station may also be eligible for financial repair assistance. In this case, they may qualify for up to \$500 in repair assistance but are required to pay the first \$100 toward diagnosis and/or emissions-related repairs.

Test-Only stations can also help consumers by giving them a CAP application. The benefit for Test-Only stations

*(continued on page 4)*

### SMOG CHECK EXAMS DEVELOPED BY LICENSED TECHS

Questions on Smog Check technician examinations are developed by licensed Smog Check Technicians in a structured workshop format.

"Information developed by an additional group of licensed technicians [is] then used to set the minimum passing score to a similar difficulty between the old and new exams," explained George Adelsperger, Chief of BAR's Technical Services Branch.

For example, on a previous Smog Check technician exam, the minimum passing score was 75 correct answers; the new replacement exam has a minimum passing score of 69 correct answers. Although the minimum passing scores are different, the exams are of equal difficulty. As a result, a candidate that passed the earlier exam would be expected to pass the new exam without any additional study. A candidate who failed the earlier exam but did no additional studying would be likely to fail the new exam.

## CAP PROGRAM *(continued from page 3)*

is that making a CAP application available to an angry consumer whose vehicle has just failed a Smog Check test can help calm them down. And if they don't use it, maybe they'll give the application to a friend or neighbor.

Gold Shield stations benefit whether the car is repaired or retired. If customers retire old, gross-polluting vehicles, data show that they are likely to replace them with newer, cleaner running cars. While there's no guarantee that will happen, the shop that gave that motorist good customer service should be in a very good position to attract that customer's business in the future.

"Since the repair of CAP cars is only available at Gold Shield Stations, these shops really are in a unique position to help market the program to increase their repair revenue, establish a good customer base and clean the air all at the same time," Lafferty explained.

CAP fits into almost every Gold Shield station business strategy, but like any business, it takes some work to capture a share of the marketplace. Some stations may assume that their customers don't need financial help to make Smog Check repairs, but that isn't always the case. In any area of the State, people can lose their jobs or have temporary financial setbacks; they may appreciate some assistance in making necessary repairs. Residents of retirement communities, disabled citizens, and students often need financial assistance.

Sometimes people buy cars beyond their financial means—the ride is nice, but they can't afford the repairs. Some station owners have expressed concerns that low-income motorists are not part of their clientele. According to Lafferty, station owners might be surprised

to learn that some of these same low-income motorists are their regular customers.

Many of the cars repaired in CAP are older vehicles with emission control systems that are easier to work on because technicians are very familiar with the older technology. This is particularly true for cars that are 18–25 years old. Technicians at Gold Shield stations are also likely to see the most complex emission repair problems. Fixing these cars is a way to be known within the community as the place to go to get cars repaired. For many Gold Shield stations, there is a sense of pride in repairing gross polluters.

Using advertisements at English and Spanish news outlets statewide, the Department of Consumer Affairs and BAR will continue to promote CAP through the "Breathe Easier" public awareness campaign through June 2006. In addition, CAP is distributing applications and holders to Gold Shield and Test-Only stations. You can also obtain these materials from your BAR Representative during routine station inspections, or by calling CAP at (866) 272-9642. Consumers can also download an application at [www.smogcheck.ca.gov](http://www.smogcheck.ca.gov).

Look around your community—if there are only a few Gold Shield stations in the area, the field might be wide open for you to use CAP to find your niche market. This is especially true in economically challenged areas. Participating in CAP may increase revenues, especially when your usual business is slow. Helping to clean the air is also a good way to give back to your community, so we can all breathe easier! To obtain a Gold Shield station application, go to [www.smogcheck.ca.gov](http://www.smogcheck.ca.gov) or call (800) 952-5210.

## GIL DELUNA NAMED BAR OUTREACH MANAGER

Long-time Department of Consumer Affairs' Bureau of Automotive Repair (DCA/BAR) manager Gil DeLuna was recently named BAR Outreach Manager of the Department's Consumer and Community Relations Division.

DeLuna, who will be based in Sacramento, has worked in the Department since 1987, most recently as manager of the Hayward Complaint Mediation Office;

prior to that, he served in a variety of capacities for both DCA and BAR.

As Outreach Manager, DeLuna will develop and implement a grass roots outreach plan that will include information from the Smog Check, Automotive Repair, and Consumer Assistance programs as well as the Breathe Easier Campaign. He will also manage BAR special events, develop presentation materials, and provide outreach training to field staff.

He can be reached at (916) 574-7409.

## SMOG CHECK ADVISORY

### STATE TARGETS HIGH-POLLUTING VEHICLES TO HELP CALIFORNIANS

#### BREATHE EASIER

More than 10,500 high-polluting vehicles have been taken off the road by the Department of Consumer Affairs' Bureau of Automotive Repair's (DCA/BAR) Consumer Assistance Program (CAP), which began on September 1, 2004. In March 2005, the Governor launched the "Breathe Easier" public awareness campaign to promote CAP statewide.

As part of the Vehicle Retirement Program, CAP will pay motorists \$1,000 to voluntarily retire vehicles that fail a biennial Smog Check or will pay income-eligible vehicle owners up to \$500 to make smog-related repairs.

"If a vehicle fails its Smog Check, it is not the end of the world, but it's an opportunity to get a high-polluting vehicle off the road for good and to be paid \$1,000 for it," said DCA Director Charlene Zettel. "Reducing air pollution is a priority for California, and every crushed polluter adds to cleaner air."

The Breathe Easier campaign promotes vehicle retirement and raises awareness about high-polluting vehicles, their contribution to air pollution, and the associated negative health effects of pollution, particularly on children. The

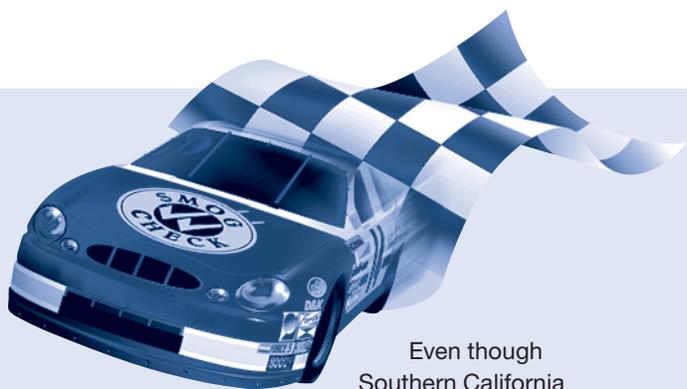

average retirement age of high-polluting vehicles is 18–20 years. Some older cars can produce up to 30 times more emissions than new vehicles.

According to the 2001 California Health Interview Survey (CHIS), one out of every 10 children in the State suffers from respiratory disease. Each year 15,000 children are hospitalized, forcing their parents to miss work and the children to miss school. In a related study, the California Department of Health Services reported that in 2000, hospitalizations from asthma-related conditions cost \$480 million.

CAP's goal is to crush 15,000 high-polluting vehicles by June 30, 2006, which will remove more than 700 tons of smog-forming pollutants from the air annually.

Smog Check stations can order a supply of CAP applications and a free front counter application holder by calling (866) 272-9642. Consumers can download an application directly from the BAR Web site at [www.smogcheck.ca.gov](http://www.smogcheck.ca.gov).

More information about the Breathe Easier campaign is available in both English and Spanish at [www.breatheasier.ca.gov](http://www.breatheasier.ca.gov).

Even though Southern California had overall good air

quality in 2005, according to the South Coast Air Quality Management District it made the top of the list of worst air quality for 8-hour ozone values. Houston, Texas, had the most severe ozone air pollution for one-hour ozone levels. In 2003 and 2004, the San Joaquin Valley had the worst air quality in the nation for 8-hour ozone violations. Under the federal standard, ground-level ozone, the primary ingredient in smog, is limited to .08 parts per million over an eight-hour period.

### LITTLE SCOOPS

A reminder—Gold Shield stations in enhanced areas may certify test-only directed vehicles, but only if the vehicle failed its initial test at a Test-Only station and the Gold Shield station actually performed repairs on the failed vehicle. Since repair data is critical to program evaluation, be sure to enter repair data into the analyzer for all vehicles you have repaired.

Detailed Occupational Analysis questionnaires were recently mailed to approximately 5,400 licensed Smog Check technicians, according to George Adelsperger, Chief of BAR's Technical Services Branch. The survey is used to collect information from technicians regarding the tasks they perform in the workplace. The information is then used to develop new task statements and to write new smog technician license examinations.

## VOLVO SETTLES WARRANTY ISSUE WITH ARB

The California Air Resources Board (ARB) recently announced that Volvo Motors of North America has agreed to provide extended warranty coverage for its electronic throttle module (ETM), an emissions component that could cause an increase in smog-forming emissions and also affect a vehicle's driveability.

The ETM was factory installed on approximately 356,000 passenger cars sold in the United States and Canada during model years 1999–2002. ARB took action when Volvo reported unusually high failure rates for the ETM as part of California's emissions warranty reporting requirements.

Manufactured by Magnetti Marelli and installed on specific Volvo models, the faulty ETM will be replaced at no charge to the vehicle owner if it fails within the extended warranty period, which was increased to 10 years or 200,000 miles, whichever occurs first. The original warranty coverage on the vehicle's ETM

was for a period of 7 years or 70,000 miles. The newly reached agreement will be applicable to Volvo owners in the United States and Canada.

Volvo has also established a reimbursement procedure for Volvo owners who may have experienced out-of-pocket expenses associated with a previous repair or replacement of the ETM.

In addition, a corrective software package for Volvo's on-board computers will be available in early 2006 as part of the ARB settlement.

Volvo began sending notices to alert all affected owners of the provisions of the extended warranty agreement on December 5, 2005.

For more information, owners can contact Volvo's Customer Care Center at (800) 458-1552.

## CHRYSLER AGREES TO RECALL VEHICLES WITH DEFECTIVE EMISSION CONTROLS

The U.S. Environmental Protection Agency (USEPA), the U.S. Department of Justice, and the California Air Resources Board (ARB) recently announced that a nationwide settlement has been reached with Daimler Chrysler Corporation (DCC) to repair defective emission controls on nearly 1.5 million Jeep and Dodge vehicles for model years 1996–2001.

The agreement also settles allegations that DCC violated the Clean Air Act (CAA) by failing to disclose the defective systems on the affected vehicles.

According to the settlement with ARB, DCC agreed to extend warranty coverage for catalytic converters on more than 90,000 light- and medium-duty trucks and vans built between 1996 and 1999. The auto manufacturer also agreed to recall on-board diagnostic (OBD) systems in approximately 40,000 of the affected vehicles and to pay \$1 million to the ARB.

DCC models affected include Dodge Ram Pickups, Ram Vans, Dakotas, Jeep Wrangler and Cherokee vehicles equipped with certain 2.5L,

3.9L, 4.0L, 5.2L, and 5.9L engines and equipped with catalytic converters that use a ceramic substrate.

A faulty mat material designed to surround and support the substrate can fail to hold it in place during normal driving. Drivers of vehicles with defective catalysts may hear a rattling noise coming from beneath the vehicle, which is the strongest indicator of a damaged catalyst. Other symptoms that may occur include a loss of power, hard engine starting, and illumination of the dashboard check engine light.

Warranties on the affected vehicles will be extended to 10 years or 120,000 miles, or one year from the date of the owner notification letter, whichever provides longer coverage. The original catalytic converter warranty is seven years or 70,000 miles. DCC will also cover the replacement of catalytic converters on these vehicles for two years from the date of the owner notification letter, should the owner fail a Smog Check as a direct result of a defective original catalytic converter. Owners who suspect they may have a defective catalytic converter can take their vehicles to a dealer for an inspection at no charge. As part of its agreement, DCC will reimburse any owners who paid to have a defective catalytic converter replaced at their own expense.

(continued on page 7)

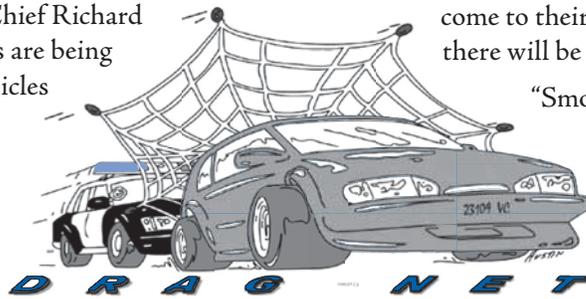

## DRAGNET

### BAR HELPS LAW ENFORCEMENT STOP ILLEGAL STREET RACERS

Law enforcement personnel from all over the state have begun training with Department of Consumer Affairs' Bureau of Automotive Repair (DCA/BAR) representatives to identify illegal modifications made to vehicles that participate in illegal street racing as part of the new DragNet program.

In addition to being busted on the street, vehicle owners caught in the DragNet program are required to remove illegal speed components such as nitrous oxide injection systems, turbocharger systems without Air Resources Board executive orders, and many other modified emission control components.

"When police officers stop vehicles, they conduct inspections to identify illegal modifications," said BAR Chief Richard (Dick) Ross. "Those owners are being required to return their vehicles to legal condition and have them inspected at BAR's referee contractor before being cleared by a judge."

The crackdown began as a result of a statewide \$5 million grant given to law enforcement agencies from the California Office of Traffic Safety. The grant was created because deaths from illegal street racing have climbed significantly over the last few years.

Police believe that if a vehicle is illegally modified to go fast, it may be used in some form of street racing that could result in serious injuries and deaths. A correlation between vehicles equipped with illegal racing components and the illegal street races these vehicles are involved in has been identified, according to law enforcement and safety experts.

Ross also warned that if technicians and shops are "looking the other way" when these illegal street racers come to their shop for Smog Check inspections, there will be sanctions for them as well.

"Smog certification of illegal vehicles has serious consequences," he added. "Once an illegal car is identified, it's easy for us to track those vehicles back to a certifying station."

### RECALL VEHICLES *(continued from page 6)*

In addition to the catalyst problem, the OBD systems of some of the affected DCC vehicles built between 1996 and 1998 do not properly detect catalytic converter failure. OBD systems, which are required in all light- and medium-duty vehicles built for sale in California since 1996, alert drivers of possible malfunctioning emission control equipment by illuminating the check engine light. As part of the settlement, DCC is recalling those vehicles with defective OBD systems and will recalibrate their computers with new software. Under the recall, owners can return their vehicles to a local DCC dealership for a simple software download at no expense to the owner.

DCC is currently in the process of notifying affected vehicle owners about the recall and extended warranty.

More information about this action and other ARB motor vehicle programs can be found at [www.arb.ca.gov](http://www.arb.ca.gov) or by calling 1-800-end-smog (800-363-7664).

### BEWARE OF EIS REPAIRS BY UNAUTHORIZED SERVICE PROVIDERS

Smog Check station owners and managers are urged to beware of unauthorized service technicians not employed by test analyzer manufacturers who offer their services to make repairs inside the secure areas of the Emission Inspection System (EIS).

"Allowing unauthorized service technicians access to secure areas of a BAR-certified analyzer violates regulations and can be costly, because the offending shop will be out of business while the analyzer is being re-certified," said Department of Consumer Affairs/Bureau of Automotive Repair (DCA/BAR) Smog Check Field Operations and Enforcement Program Manager Richard (Dick) Sullivan.

Under Section 3340.17(f) of the California Code of Regulations, only Bureau-authorized representatives or authorized manufacturer's representatives are allowed access to the test analyzer system or emissions inspection system for service or inspection.

## WE GET QUESTIONS...

By Alan Coppage, Program Representative

**Q** When a car fails its Smog Check, how far past the cut points should I attempt to lower the emissions?

**A** While BAR regulations specify the cut points at which vehicles will pass a Smog Check, the point is not to fix them just enough to pass the test. BAR believes that keeping a vehicle in good repair according to manufacturer's specifications will clean the air as well as help your customer avoid unexpected breakdowns on the side of the road. Proper and thorough diagnosis is the first step in repairing a failing vehicle. A technician must know what is wrong before effective repairs can be made. After the repairs are made, the technician should determine if what was done actually fixed the car and lowered the emissions. You can do a pre-test to find out if the car you just repaired is closer to the average emissions for that model/year group, or closer to the pass/fail cut points. A vehicle that is operating as it was designed to will be closer to the average passing emissions on the Vehicle Inspection Report (VIR) than to the pass/fail cut points. If a vehicle barely passes, odds are that it will fall into a failing condition soon after repairs are made. Vehicles that are completely repaired have better performance, better gas mileage, and offer their owners increased performance and reliability as well as being friendlier to our environment. "Fix to pass" does a disservice to your customer and to all Californians who breathe our air.

Alan Coppage, a Program Representative III and BAR's Quality Assurance Coordinator, researches and writes answers to your questions for our "We Get Questions . . ." column. Coppage joined BAR in 1991

after a distinguished nine-year career in the repair industry at Snider Imports in Sacramento. He is also a Hall of Fame technician with American Isuzu Motors and Suzuki Motorcars of North America.

**Q** There are many after-market performance parts that are legal for use on cars in California, but there are also many that are illegal. How is a Smog Check technician supposed to know the difference?

**A** Most after-market parts are intended as direct replacements for original equipment manufacturers (OEM) parts. That is, they are identical in design and function. In contrast, other after-market parts may be designed as a performance upgrade. Examples of such parts would include performance exhaust headers, ignition systems, or nitrous oxide injection systems. In these cases, the California Air Resources Board (ARB) must approve the after-market emission equipment parts. When after-market parts are approved, they are assigned an Executive Order number (EO#) that indicates the ARB has approved it for installation on a specific vehicle. If you come across these after-market parts, refer to Appendix K in your Smog Check Inspection Manual to determine if the part requires ARB approval. If so, check for the EO# that is sometimes listed on the part. If there is an EO# on the part, write it down and compare it to the after-market parts database link at the bottom of ARB's home page at [www.arb.ca.gov](http://www.arb.ca.gov). The EO# must correspond to the part and to the specific vehicle on which it is installed. Additionally, the part or parts must be installed according to the manufacturer's instructions. Many of these specific requirements are listed on the ARB Web site, or, if you need further help, call your local BAR field office.

Smog Check station owners, managers, and technicians are encouraged to submit questions to the Smog Check Advisory either via e-mail to [kate\\_mcguire@dca.ca.gov](mailto:kate_mcguire@dca.ca.gov) or by mail to the following address:

BAR Q&A  
10240 Systems Parkway  
Sacramento, CA 95827  
Attn: Alan Coppage

Please include your name and a telephone number so we can verify your inquiry and let us know if we can use your name (or initials) and city in our response.

# SMOG CHECK ADVISORY

## INTERESTED PARTIES MAILING LIST ANNUAL UPDATE

The time has come for BAR to update its interested parties mailing list. This list is used primarily to mail informational meeting invitations, regulation workshop invitations and regulation hearing notices. This list is not used for mailing the Repair Reporter or Smog Check Advisory. This mailing list must be updated annually pursuant to Government Code section 14911.

Provided below are several areas of interest from which you may select. You may select one of the first three basic categories, or you may select as many subcategories as you wish. For example, if you select "General," you will receive information, invitations and notices from all categories, but if you select "Smog Check" you will only receive information, invitations and notices relating to the Smog Check Program.

If you are not already on this mailing list and wish to be added, please complete the bottom portion of this page, detach it and return it to:

BUREAU OF AUTOMOTIVE REPAIR  
ATTN: REGULATIONS MAILING LIST  
10240 SYSTEMS PARKWAY  
SACRAMENTO, CA 95827

If you are already on the Bureau's interested parties mailing list, you do not need to respond to this announcement. A separate notification has been mailed to those currently on the mailing list.

Thank you for your interest and cooperation.

(DETACH HERE)

Please select one or more of the following subjects. If no subject is selected, "General" will be used. Please complete, detach and return.

**GENERAL**  
(includes all subjects)

**AUTOMOTIVE REPAIR**  
(includes all auto repair)

**SMOG CHECK**  
(includes all Smog Check)
